United States of America

How many people die from smoking in the United States each year?
549,585

What is the economic cost of smoking and tobacco use in the United States each year?
623,366,701,056 US dollars

Current Rates of Smoking and Tobacco Use in the United States

Tobacco use continues to be an epidemic in the United States. Government complacency in the face of the tobacco epidemic protects the tobacco industry in the United States as the death toll grows each year. Proponents of healthier societies must push for the implementation of evidence-based best practices in tobacco control to create change and reduce the negative effects of tobacco use.

Negative Effect of Tobacco Use in the United States

Tobacco use harms both the public and fiscal health of the United States, threatening efforts to improve equity, alleviate poverty, and protect the environment.

Societal Harms
The economic cost of smoking the United States is 623,366,701,056 US dollars. This includes direct costs related to healthcare expenditures and indirect costs related to lost productivity caused by illness and premature death.

Harms Development
Tobacco spending diverts funds from the resources that families need to rise out of poverty. On average in the United States, a smoker must spend 1.16% of GDP per capita to buy 100 packs of the most popular cigarettes in a year.

Harms Health Equity
The tobacco industry markets its products aggressively to lower-income populations and youth in the United States.

Harms NCDs
Not only is smoking a major risk factor for the 4 largest noncommunicable diseases (cancer, heart diseases, respiratory diseases, and diabetes), but people living with mental illness are nearly 2x as likely to smoke as other individuals.

Learn more about Health Effects.

Environmental Harms
Cigarette butts are the most commonly discarded pieces of waste worldwide. It is estimated that 46,888 tons of butts wind up as toxic trash in the United States each year, equal to 13,425 female African elephants.
Impact of the Tobacco Supply Chain on the United States

The tobacco industry profits significantly from producing and selling tobacco. At the same time, across the tobacco supply chain, there are significant negative health and economic repercussions for the United States.

Tobacco Production
There were approximately 270 billion cigarettes produced in the United States in 2016.

Tobacco Industry
The total revenue of the 6 largest tobacco companies in the world was USD 336 billion in 2019, about the same as Viet Nam’s Gross National Income (GNI), 5x Ghana’s GNI and 9x Paraguay’s GNI.

Tobacco Growing
There were 212,260 tons of tobacco produced in the United States in 2019 on 91,910 hectares of quality agricultural land that could have been used to grow food.

Ending the Tobacco Epidemic in the United States

Fortunately, there are evidence-based -i.e. proven -solutions to the challenges posed by tobacco use. For several decades, governments around the world have been introducing a set of policies that address the demand for tobacco products, particularly among youth. These policies effectively reduce consumption and are cost-effective because they save governments enormous amounts of money in health care spending and increase economic productivity.
