# **Negative Effect of Tobacco Use in Comoros**

Tobacco use harms both the public and fiscal health of Comoros, threatening efforts to improve equity, alleviate poverty, and protect the environment.

#### **Societal Harms**

The economic cost of smoking Comoros is 1,954,790,667 Comoro francs. This includes direct costs related to healthcare expenditures and indirect costs related to lost productivity caused by illness and premature death.

# **Harms Development**

Tobacco spending diverts funds from the resources that families need to rise out of poverty. On average in Comoros, a smoker must spend 8.3% of GDP per capita to buy 100 packs of the most popular cigarettes in a year.

#### **Environmental Harms**

Cigarette butts are the most commonly discarded pieces of waste worldwide. It is estimated that 1,102,311 tons of butts wind up as toxic trash in the world each year, equal to 416,667 female African elephants.

# **Harms Health Equity**

The tobacco industry markets its products aggressively to lower-income populations and youth in Comoros.

# **Harms NCDs**

Not only is smoking a major risk factor for the 4 largest noncommunicable diseases (cancer, heart diseases, respiratory diseases, and diabetes), but people living with mental illness are nearly 2x as likely to smoke as other individuals.

Learn more about Health Effects.

# **Impact of the Tobacco Supply Chain on Comoros**

The tobacco industry profits significantly from producing and selling tobacco. At the same time, across the tobacco supply chain, there are significant negative health and economic repercussions for Comoros.

#### **Tobacco Production**

There were more than 5,000,000,000,000 cigarettes produced in the world in 2019, or nearly 2 cigarettes per person per day.

#### **Tobacco Industry**

The total revenue of the 6 largest tobacco companies in the world was USD 362 billion in 2022, about the same as Pakistan's Gross National Income (GNI), 5x Panama's GNI and 9x Paraguay's GNI.

#### **Tobacco Growing**

Comoros is not a major producer of tobacco, but globally there were 4.1 million hectares of arable land dedicated to tobacco growing in 2022 which was nearly as much as the land dedicated to the world's large orange crop.

# **Ending the Tobacco Epidemic in Comoros**

Fortunately, there are evidence-based -i.e. proven -solutions to the challenges posed by tobacco use. For several decades, governments around the world have been introducing a set of policies that address the demand for tobacco products, particularly among youth. These policies effectively reduce consumption and are cost-effective because they save governments enormous amounts of money in health care spending and increase economic productivity.

# **Tobacco Tax Policies in Comoros**

Using evidence-based international recommendations/best practices, the Tobaccononomics Cigarette Tax Scorecard assesses four components of tax systems - price, change in affordability, tax share, and structure - on a scale of 0 to 5, where a higher score is preferred.

Overall Score	Cigarette Price		Change in Affordability Over Time		Tax Share of Price		Tax Structure
1.75	1.00	0	.00	4	.00	2	.00
The overall score is average of the four component scores.	Consumers respond to higher prices by decreasing consumption and some quit using tobacco.		In addition to price, change in affordability is critical. Cigarettes need to become less affordable for consumption to decline.		Large tax shares of price are usually a good indicator that taxes are working.		Best practices include relying more on uniform specific excise taxes that are adjusted regularly to outpace growth and inflation.
