Current Rates of Smoking and Tobacco Use in Costa Rica

Tobacco use continues to be an epidemic in Costa Rica. Government complacency in the face of the tobacco epidemic protects the tobacco industry in Costa Rica as the death toll grows each year. Proponents of healthier societies must push for the implementation of evidence-based best practices in tobacco control to create change and reduce the negative effects of tobacco use.

### Negative Effect of Tobacco Use in Costa Rica

Tobacco use harms both the public and fiscal health of Costa Rica, threatening efforts to improve equity, alleviate poverty, and protect the environment.

#### Societal Harms

The economic cost of smoking Costa Rica is 170,903,979,425 Costa Rican colons. This includes direct costs related to healthcare expenditures and indirect costs related to lost productivity caused by illness and premature death.

#### Harms Development

Tobacco spending diverts funds from the resources that families need to rise out of poverty. On average in Costa Rica, a smoker must spend 2.4% of GDP per capita to buy 100 packs of the most popular cigarettes in a year.

#### Environmental Harms

Cigarette butts are the most commonly discarded pieces of waste worldwide. It is estimated that 314 tons of butts wind up as toxic trash in Costa Rica each year, equal to 90 female African elephants.

#### Harms Health Equity

The tobacco industry markets its products aggressively to lower-income populations and youth in Costa Rica.

#### Harms NCDs

Not only is smoking a major risk factor for the 4 largest noncommunicable diseases (cancer, heart diseases, respiratory diseases, and diabetes), but people living with mental illness are nearly 2x as likely to smoke as other individuals.

Impact of the Tobacco Supply Chain on Costa Rica

The tobacco industry profits significantly from producing and selling tobacco. At the same time, across the tobacco supply chain, there are significant negative health and economic repercussions for Costa Rica.

Tobacco Industry

The total revenue of the 6 largest tobacco companies in the world was USD 362 billion in 2022, about the same as Pakistan's Gross National Income (GNI), 5x Panama's GNI and 9x Paraguay's GNI.

Tobacco Production

There were approximately 1 billion cigarettes produced in Costa Rica in 2016.

Tobacco Growing

There were 47 tons of tobacco produced in Costa Rica in 2022 on 25 hectares of quality agricultural land that could have been used to grow food.

Ending the Tobacco Epidemic in Costa Rica

Fortunately, there are evidence-based -i.e. proven -solutions to the challenges posed by tobacco use. For several decades, governments around the world have been introducing a set of policies that address the demand for tobacco products, particularly among youth. These policies effectively reduce consumption and are cost-effective because they save governments enormous amounts of money in health care spending and increase economic productivity.

Tobacco Tax Policies in Costa Rica

Using evidence-based international recommendations/best practices, the Tobacconomics Cigarette Tax Scorecard assesses four components of tax systems - price, change in affordability, tax share, and structure - on a scale of 0 to 5, where a higher score is preferred.

Overall Score	Cigarette Price	Change in Affordability Over Time	Tax Share of Price	Tax Structure
2.13	2.00	0.00	2.50	4.00
The overall score is an average of the four component scores.	Consumers respond to higher prices by decreasing consumption and some quit using tobacco.	In addition to price, change in affordability is critical. Cigarettes need to become less affordable for consumption to decline.	Large tax shares of price are usually a good indicator that taxes are working.	Best practices include relying more on uniform specific excise taxes that are adjusted regularly to outpace growth and inflation.
