Current Rates of Smoking and Tobacco Use in Iraq

Tobacco use continues to be an epidemic in Iraq. Government complacency in the face of the tobacco epidemic protects the tobacco industry in Iraq as the death toll grows each year. Proponents of healthier societies must push for the implementation of evidence-based best practices in tobacco control to create change and reduce the negative effects of tobacco use.

Adult Smoking Prevalence in Iraq

15+ years old; 2025

Men	Women
15.30%	0.80%

Adult smoking prevalence in Iraq is 8.00%.

Number of Adult Smokers in Iraq

15+ years old; 2022

### Negative Effect of Tobacco Use in Iraq

Tobacco use harms both the public and fiscal health of Iraq, threatening efforts to improve equity, alleviate poverty, and protect the environment.

#### Societal Harms

The annual cost-of-illness attributable to smoking in Iraq is 2,079,549,137,287 Iraqi dinars. This includes direct costs related to healthcare expenditures and indirect costs related to lost productivity caused by illness and premature death.

#### Harms Development

Tobacco spending diverts funds from the resources that families need to rise out of poverty. On average in Iraq, a smoker must spend 2.59% of GDP per capita to buy 100 packs of the most popular cigarettes in a year.

#### Harms Health Equity

The tobacco industry markets its products aggressively to lower-income populations and youth in Iraq.

#### Environmental Harms

Cigarette butts are the most commonly discarded pieces of waste worldwide. It is estimated that 14,940 tons of butts wind up as toxic trash in Iraq each year, equal to 5,533 female African elephants.

#### Harms NCDs

Not only is smoking a major risk factor for the 4 largest noncommunicable diseases (cancer, heart diseases, respiratory diseases, and diabetes), but people living with mental illness are nearly 2x as likely to smoke as other individuals.

## Impact of the Tobacco Supply Chain on Iraq

The tobacco industry profits significantly from producing and selling tobacco. At the same time, across the tobacco supply chain, there are significant negative health and economic repercussions for Iraq.

### Tobacco Industry

The total revenue of the 6 largest tobacco companies in the world was USD 364 billion in 2023, about the same as Pakistan's Gross National Income (GNI), 5x Panama's GNI and 9x Paraguay's GNI.

### Tobacco Production

There were more than 5,000,000,000,000 cigarettes produced in the world in 2019, or nearly 2 cigarettes per person per day.

### Tobacco Growing

There were 2,351 tons of tobacco produced in Iraq in 2023 on 2,702 hectares of quality agricultural land that could have been used to grow food.

## Ending the Tobacco Epidemic in Iraq

Fortunately, there are evidence-based i.e. proven-solutions to the challenges posed by tobacco use. For several decades, governments around the world have been introducing a set of policies that address the demand for tobacco products, particularly among youth. These policies effectively reduce consumption and are cost-effective because they save governments enormous amounts of money in health care spending and increase economic productivity.

Tobacco Tax Policies in Iraq

Using evidence-based international recommendations/best practices, the Economics for Health Cigarette Tax Scorecard assesses four components of tax systems - price, change in affordability, tax share, and structure - on a scale of 0 to 5, where a higher score is preferred.

Overall Score	Cigarette Price	Change in Affordability Over Time	Tax Share of Price	Tax Structure
0.25	1.00	0.00	0.00	0.00
The overall score is an average of the four component scores.	Consumers respond to higher prices by decreasing consumption and some quit using tobacco.	In addition to price, change in affordability is critical. Cigarettes need to become less affordable for consumption to decline.	Large tax shares of price are usually a good indicator that taxes are working.	Best practices include relying more on uniform specific excise taxes that are adjusted regularly to outpace growth and inflation.
