Ending the Tobacco Epidemic in Niue

Fortunately, there are evidence-based i.e. proven-solutions to the challenges posed by tobacco use. For several decades, governments around the world have been introducing a set of policies that address the demand for tobacco products, particularly among youth. These policies effectively reduce consumption and are cost-effective because they save governments enormous amounts of money in health care spending and increase economic productivity.

Tobacco Tax Policies in Niue

Using evidence-based international recommendations/best practices, the Economics for Health Cigarette Tax Scorecard assesses four components of tax systems - price, change in affordability, tax share, and structure - on a scale of 0 to 5, where a higher score is preferred.

Overall Score	Cigarette Price	Change in Affordability Over Time	Tax Share of Price	Tax Structure
Insufficient data	Insufficient data	Insufficient data	Insufficient data	Insufficient data
The overall score is an average of the four component scores.	Consumers respond to higher prices by decreasing consumption and some quit using tobacco.	In addition to price, change in affordability is critical. Cigarettes need to become less affordable for consumption to decline.	Large tax shares of price are usually a good indicator that taxes are working.	Best practices include relying more on uniform specific excise taxes that are adjusted regularly to outpace growth and inflation.
